

On Track to Remove over 10,000 Metric Tons of CO2 from the Environment...and COUNTING

Triadex Services

Our Ongoing Commitment to a Better Environment

We are excited to announce that starting in 2023, an environmental offset will be applied to every order to help reduce the carbon impact. All funds collected will be joined with our company's annual commitment and donated to the following impactful organizations.

The **National Forest Foundation**, a US-based non-profit organization, is the official partner of the United States Forest Service and the only non-profit organization approved to plant trees within the 193 million acre national forest. Reforestation is a critical and much underused tool of lowering CO2 levels in the environment, which helps to sustain and increase the carbon sequestration potential of National Forests. **Since 2016, Triadex Services has financially supported the organization's goal of planting 50 million trees to restore tens of thousands of forest acres.**

The **Gold Standard**, a non-profit foundation headquartered in Geneva, Switzerland, ensures that carbon credit projects are real, verifiable, and measurable contributions to sustainable development for a safer climate. The company verifies and makes available for funding via its registry over 1,400 carbon reducing projects across 80 countries, ranging from renewable energy and biodiversity initiatives to clean cooking and efficient water projects. Once a project is funded, it is retired and no longer eligible for purchase to further ensure the integrity of carbon reduction efforts. **Triadex Services is on track to fund and retire over one hundred Gold Standard projects in 2023 alone.**

Carbon180 is a non-profit organization dedicated to working with policymakers, entrepreneurs, and peer organizations across the US to design policies that will bring necessary carbon removal solutions to gigaton scale. Their advocacy has helped put carbon removal on the map, catalyzing billions in new investments and pioneering some of the first major federal incentives. By championing equitable, science-based policies that remove carbon directly from the environment, Carbon180 is helping to create a livable climate in which current and future generations may thrive. **Triadex Services has made a multi-year commitment to support and help advance their highly effective carbon removal programs.**
